

Hold Safe (HS) - White Paper

Introduction

The **Hold Safe (HS)** is a fully decentralized governance token designed to strengthen the Hold Safe community. With an initial supply of **1 billion tokens (1,000,000,000 HS)**, the project aims to ensure security, sustainability, and complete decentralization, providing an innovative ecosystem for its participants.

Token Features

- **Token Name:** Hold Safe
- **Symbol:** HS
- **Initial Supply:** 1,000,000,000 HS
- **No Developer Wallet** - No team reserve, ensuring fair distribution.
- **Renounced Contract** - No modifications can be made to the contract after launch.
- **Locked Liquidity** - Guarantee of stability and protection against market manipulation.
- **The entire initial supply has been injected into liquidity and the staking contract**, ensuring that no loose tokens exist in the market that could harm the community. This approach strengthens the staking system, making it more robust and sustainable.

Token Economy

Hold Safe adopts a deflationary model to encourage token stability and appreciation:

- **Purchases:**
 - 3% automatically injected into liquidity.
 - 0.5% instantly burned.
- **Sales:**
 - 3% automatically injected into liquidity.
 - 0.5% instantly burned.

Staking System and Affiliate Program

The **Hold Safe** community features a **staking contract** that allows participants to earn attractive rewards. Users who stake their tokens receive **15% every 15 days**, encouraging retention and ecosystem growth.

Rewards are distributed in **dollars**, but automatically converted into **HS tokens**, ensuring asset appreciation and strengthening the market.

Additionally, the project offers an **affiliate program**, where users can refer new participants and be rewarded for contributing to community growth.

Community Governance

The **Hold Safe** token is a **governance token**, allowing holders to participate in strategic project decisions. Voting is conducted directly on-chain, promoting a truly decentralized and democratic system.

Security and Transparency

- **Audited smart contract** to ensure protection against vulnerabilities.
- **Permanently locked liquidity**, ensuring that funds are always protected.
- **Renounced contract**, guaranteeing that no changes can be made by developers.

Conclusion

The **Hold Safe (HS)** is more than just a token – it is an ecosystem built for the community, combining security, transparency, and financial growth opportunities. With a deflationary model, staking system, affiliate program, and decentralized governance, Hold Safe positions itself as a reliable and innovative option in the crypto market.

 **Join the Hold Safe revolution and be part of this unique community!**
